

Fig. 1 Plant tissues from which isolations were made and resulting colony morphologies of isolates. A) Hemp seed plated on PDA showing growth of *Alternaria* isolates. B) Cannabis stem blackening caused by *A. alternata*. C) Recovery of *Stemphylium vesicarium* from hemp seed. D) Cannabis stems from which *Neofusicoccum parvum* was recovered showing blackening, wilt and internal discolouration. E) A cannabis stem canker from which *Lasiodiplodia theobromae* was recovered. F) Top view of PDA cultures. Top left: *A. alternata*, top right: *S. vesicarium*, bottom left: *N. parvum*, bottom right *L. theobromae*. G) Bottom view of PDA cultures. Top left: *A. alternata*, top right: *S. vesicarium*, bottom left: *N. parvum*, bottom right *L. theobromae*.
